

"Schools and Rotary Clubs Working Together to Promote the Talents of our Young people..."

Excitement of Science Project...

"Real Hands On For Budding Einstein's..."

Science Made Fun...

This is an **Internet led project**, aimed at promoting the talents of young people, 13-18 years old, who are gifted in the field of Science and Mathematics.

A topic is chosen and your school can **participate** in **genuine, scientific research** via the internet. Last year the project was discovering space, previous year, global warming. A specialised web site is set up www.excitementofscience.org normally around February so that is when research starts.

The project culminates in a day at the Royal Institute in London, at the **Faraday Theatre**. **A fantastic experience**. Tickets are allocated according to the **degree of engagement** in the project of the year.

Look what **teachers say** based on **their pupils experience...**

"The day in London was a **fantastic** experience for all. I think this is one to **remember** for the **rest of their lives...**" Mrs. P Dixon, Head of Science .
Prince William School, Oundle

This really is a **wonderful opportunity** to offer to these young people and what an experience for them. Also something they can put on their CV which any Higher Education Institution should regard very highly.
